Aviation Risk Management

The Australian risk management standard describes risk management as the culture, processes and structures that are directed toward the effective management of potential opportunities and adverse effects. Risk management involves an iterative process of well-defined steps which, taken in sequence, support better decision making by facilitating a clearer insight into risk and appreciation of their potential effect.

Effective risk management, through a systematic, logical approach to identifying and treating risk to company aviation resources and operations, while supporting initiative, flexibility and adaptability, will significantly enhance Eagle Helicopters operations.

Eagle Helicopters personnel are to be fully conversant with this Risk Management Policy and ensure that it is not only adhered to but also incorporated in the management, planning and conduct of company operations.

This Policy, combined with the knowledge and experience gained with a commercial pilots license, will ensure the safety and effective employment of Eagle Helicopters' personnel and assets.

David Braid

Chief Pilot

Eagle Helicopters Pty Ltd
